Q2: How does booking lead time affect the likelihood of cancellation?

Every number on this sheet is a live COUNTIFS or arithmetic formula on Clean_Data (all 119,390 bookings). A cancellation is is_canceled = Yes, which includes no-shows.

Table A: Cancellation by lead-time band

Lead time band (days)	Lower bound (days)	Upper bound (days)	Bookings	Cancelled	Cancellation rate (all)	No-deposit bookings	No-deposit cancelled	No-deposit rate	No-deposit Online TA bookings	No-deposit Online TA cancelled	No-deposit Online TA rate	Non Refund bookings	Non Refund share of band	Share of all bookings	Share of all cancellations
0–7	0	7	19,746	1,902	9.6%	19,619	1,798	9.2%	8,315	767	9.2%	121	0.6%	16.5%	4.3%
8–30	8	30	18,960	5,283	27.9%	18,438	4,802	26.0%	10,923	3,494	32.0%	494	2.6%	15.9%	11.9%
31–90	31	90	29,553	11,141	37.7%	27,139	8,736	32.2%	16,454	6,520	39.6%	2,406	8.1%	24.8%	25.2%
91–180	91	180	26,439	11,821	44.7%	22,260	7,760	34.9%	13,233	5,889	44.5%	4,087	15.5%	22.1%	26.7%
181–365	181	365	21,544	11,947	55.5%	15,905	6,334	39.8%	7,462	3,984	53.4%	5,614	26.1%	18.0%	27.0%
Over 365	366	100,000	3,148	2,130	67.7%	1,280	264	20.6%	16	14	87.5%	1,865	59.2%	2.6%	4.8%
Total			**119,390**	**44,224**	**37.0%**	**104,641**	**29,694**	**28.4%**	**56,403**	**20,668**	**—**	**14,587**	**12.2%**	**100.0%**	**100.0%**

Bands are counted directly from lead_time (inclusive bounds; 'Over 365' = 366 days or more). Online TA = market_segment 'Online TA'. No-deposit = deposit_type 'No Deposit'. Source: Clean_Data (n = 119,390).

Table B: 60-day comparison (D-EDGE benchmark)

Group	Lead time	Bookings	Cancelled	Cancellation rate	Relative risk (>60 ÷ ≤60)	% more likely to cancel
No-deposit bookings	More than 60 days	50,599	17,901	35.4%	1.62	62%
No-deposit bookings	60 days or less	54,042	11,793	21.8%	*reference*	*reference*
All bookings	More than 60 days	63,714	30,865	48.4%	2.02	102%
All bookings	60 days or less	55,676	13,359	24.0%	*reference*	*reference*

Relative risk = cancellation rate for bookings made more than 60 days ahead ÷ rate for 60 days or less; '% more likely' = relative risk − 1. D-EDGE Hospitality Solutions (2019) reports 65% across 680 European hotels. Source: Clean_Data.

Table C: Robustness and cross-checks

C1. Bookings per band computed two ways

Lead time band (days)	Table A bookings (lead_time bounds)	COUNTIF on lead_band	Difference (must be 0)
0–7	19,746	19,746	0
8–30	18,960	18,960	0
31–90	29,553	29,553	0
91–180	26,439	26,439	0
181–365	21,544	21,544	0
Over 365	3,148	3,148	0
Total	**119,390**	**119,390**	**0**

C2. Bookings made 31–365 days ahead

Group	Bookings	Share of all bookings	Cancelled	Share of all cancellations
31–365 days	77,536	64.9%	34,909	78.9%

C3. Excluding duplicate rows (dup_flag = 0)

Lead time band (days)	Bookings (dup_flag = 0)	Cancelled	Cancellation rate	All-bookings rate (Table A)	Gap (all minus de-duplicated)
0–7	18,302	1,541	8.4%	9.6%	1.2%
8–30	16,317	4,122	25.3%	27.9%	2.6%
31–90	22,668	7,204	31.8%	37.7%	5.9%
91–180	18,171	6,310	34.7%	44.7%	10.0%
181–365	11,134	4,378	39.3%	55.5%	16.1%
Over 365	559	225	40.3%	67.7%	27.4%
Total	**87,151**	**23,780**	**27.3%**	**37.0%**	**9.8%**

C1 checks the formula band column against direct lead_time bounds. C3 repeats the analysis without rows that duplicate an earlier row on all 28 fields; the gradient still rises. Source: Clean_Data.

Table D: Chart data (feeds Figure 2)

Category label (axis)	All bookings	No-deposit bookings	No-deposit online travel agent bookings	No-deposit online TA bookings (n)	Online TA point plotted?
0–7 n = 19,746	9.6%	9.2%	9.2%	8,315	Yes
8–30 n = 18,960	27.9%	26.0%	32.0%	10,923	Yes
31–90 n = 29,553	37.7%	32.2%	39.6%	16,454	Yes
91–180 n = 26,439	44.7%	34.9%	44.5%	13,233	Yes

181–365 n = 21,544	55.5%	39.8%	53.4%	7,462	Yes
Over 365 n = 3,148	67.7%	20.6%	#N/A	16	No (n < 30)

The online TA series uses NA(), which Excel draws as a gap, where fewer than 30 no-deposit online TA bookings support the rate (suppression rule). Source: Table A above.
